DESIGNING A TEMPORARY
PARASISTIC HOUSE IN BETWEEN
TWO BUILDINGS AT CBD

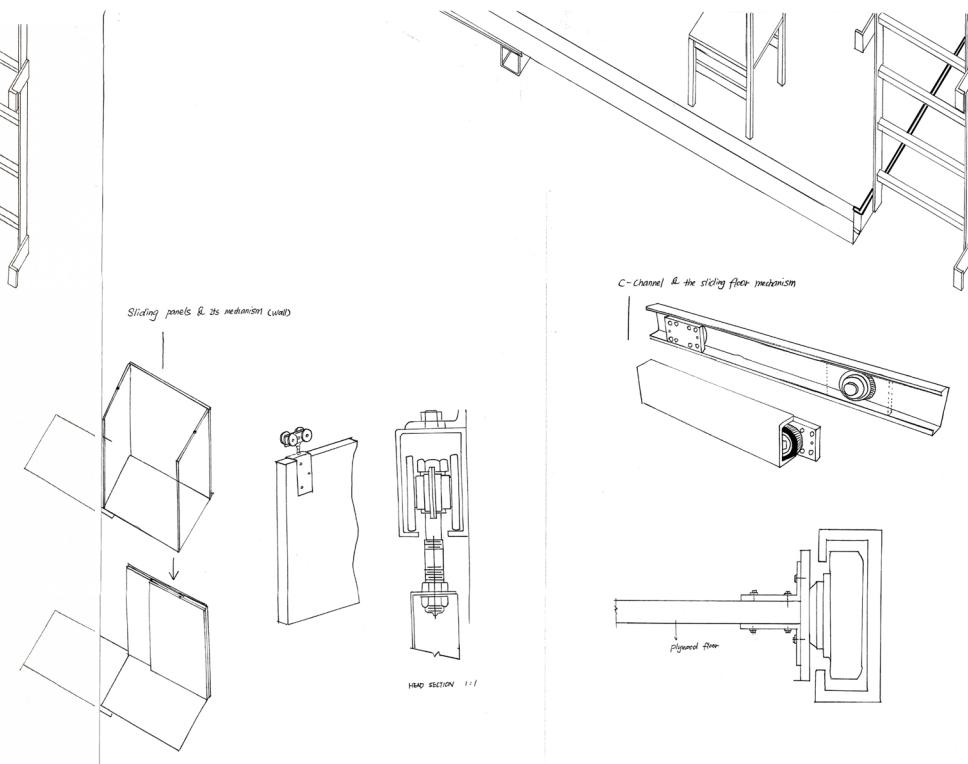

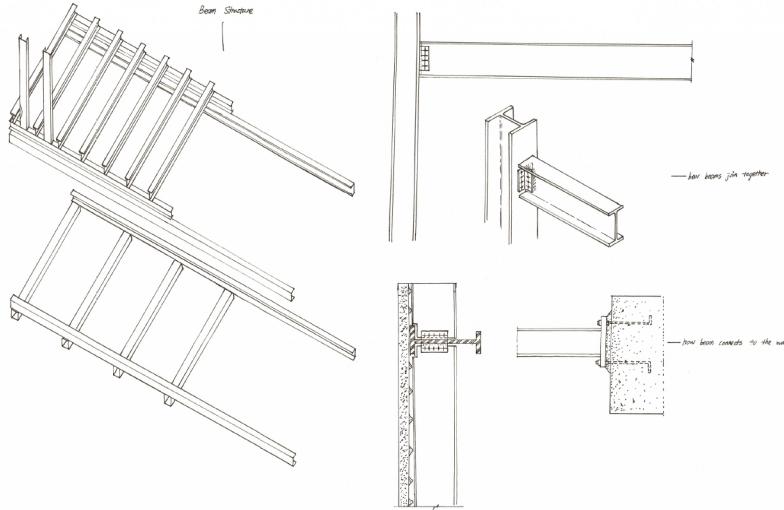

THE COMPACT & THE EXPANDED HOUSE

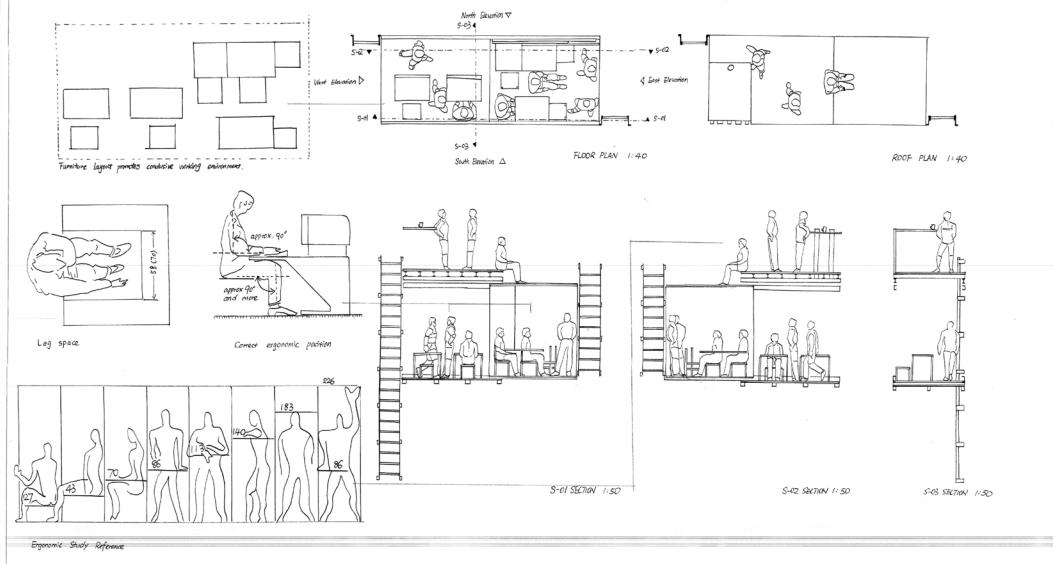

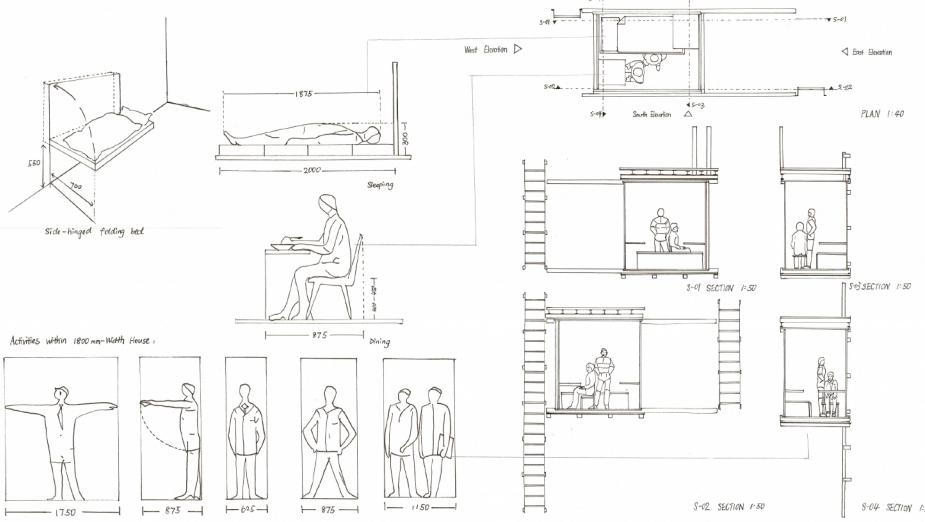

CONSTRUCTING A TEMPORARY HOUSE BETWEEN TWO BUILDINGS @ CBD

CONSTRUCTION

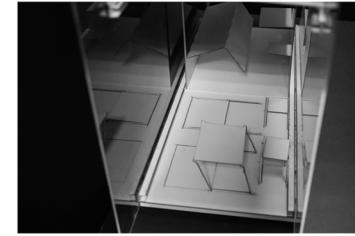

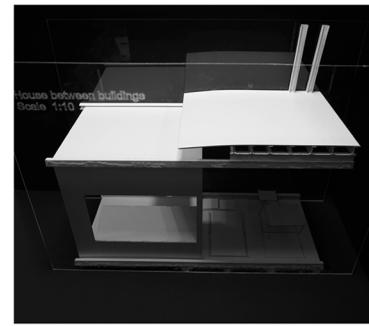

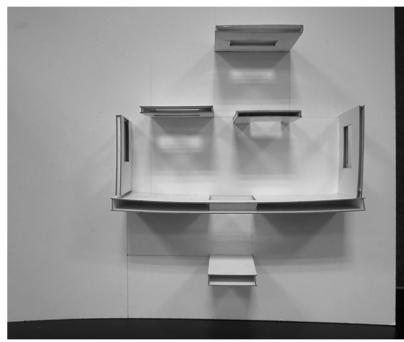

ERGONOMICS

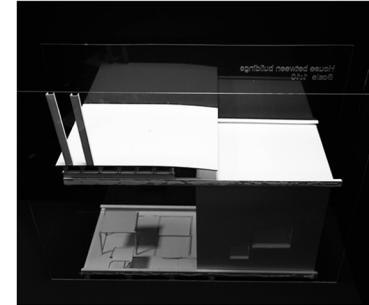

THE COMPACT AND EXPANDED HOUSE MODELS

This project aims to utilise the 2m-wide space between two buildings at CBD and create an expandable house which have 2 uses: being rent out in the day as a hot desking place and as a resting place at night.

In the day, the wooden floor is slided out from the C chanel to create a doubled space. The space is a space which can accomodate at most 7 people to work together and have meetings. People can also climb the ladder to the roof to take a rest amongst busy work. Due to the limited space 2m wide gap, the roof area will be just nicely shaded.Besides, all the furniture and partition walls are foldable and can be hidden or taken out according to users' needs.

At night, all the chairs and tables are folded and hidden in the wall, there is only one closed space for the owner to rest at night. As CBD area at night is like a ghost town with very few residents, this installation can hopefully bring more life to the CBD area at night and provides the CBD workers a more convenient place to work.
